EXAMINER

UNGAR, DANIEL M

ART UNIT PAPER NUMBER

2132

DATE MAILED: 02/28/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	09/920,198	MAGEE, STEPHEN D.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Daniel M. Ungar	2132	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 01 August 2001.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2132

DETAILED OFFICE ACTION

1. Claims 1-20 have been examined.

CLAIM REJECTIONS – 35 U.S.C. 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim recites, “a user requesting secure multimedia services in the second network.” The claim is ambiguous as to what is in the second network, the user or the services.

CLAIM REJECTIONS – 35 U.S.C. 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:  
A person shall be entitled to a patent unless –  
(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6, 7, 10, 13, 14, 15, 17, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Toth et al., U.S. Patent Number 5,708,655.

5. Regarding claim 1, Toth et al. discloses a secure communication system comprising:  
first and second networks connected to, respectively, a plurality of first and second network elements (see column 6, lines 28-65; figures 1 and 4),  
a user requesting secure multimedia services in the second network, the first network being the user's home network (see column 5, lines 28-35; column 7, lines 41-46),  
the first security controller selecting one of the first network elements for coupling to the second network, and the second security controller selecting one of the second elements

Art Unit: 2132

for dynamically coupling to the first network element (see column 8, lines 1-11; figures 1 and 4, items 26, 28, 38, 46, 48, and 138).

6. Regarding claims 2 and 15, Toth et al. disclose coupling the network elements over an IP connection (see column 8, lines 1-11 and 32-40).

7. Regarding claims 6, 7, 17, and 18, Toth discloses IP Address Servers for both the home and visited networks, which meet the limitations of call state control functions for the home and visited networks, respectively (see column 7, lines 41-46; column 8, lines 62-67; column 9, lines 14-19 and lines 33-44).

8. Regarding claim 10, Toth et al. discloses a method for secure communication in a communication system including a home and visited network having respective pluralities of first and second network elements and a first and second security controller (see column 6, lines 28-65; figures 1 and 4; column 8, lines 41-54) comprising assigning a user to the home network and requesting by the user multimedia services from the visited network (see column 5, lines 28-35; column 7, lines 6-13 and 41-46); selecting by the visited network one of the second network elements (see column 8, lines 1-11); selecting by the home network one of the first network elements in response to user request (see column 8, lines 1-11); and dynamically coupling the first and second network elements (see column 8, lines 1-11). Note that because the first and second network elements are coupled, it is inherent that those elements were selected by respective networks.

9. Regarding claims 13 and 14, Toth et al. disclose network pooling (see column 9, lines 34-44).

#### CLAIM REJECTIONS – 35 U.S.C. 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter

Art Unit: 2132

sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 4, 5, 11, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toth et al. in view of Ekbert, WIPO International Application Number WO 00/02406.

11. Regarding claim 3, although Toth et al. disclose the use of user authentication means (see column 8, lines 48-54), they do not disclose the pre-negotiation of an Internet Protocol security by the first and second security controllers for the first and second elements, or security associations between network elements and a plurality of networks, or negotiation of a security association prior to requesting of services. Nevertheless, the use of IP security prior to communication between two networks was well known in the art at the time of the invention. For example, Ekbert discloses, in a similar field of endeavor, security negotiation by the first and second security controllers (see page 7, lines 11-23).

12. Regarding claims 4, 5, and 12, Ekbert discloses the security controllers of the first and second networks establish security associations between network elements and other networks (see page 7, lines 11-23; column 8, lines 13-24). Note that the requesting of services or data has not yet taken place.

13. Regarding claims 11 and 16, Ekbert discloses negotiating a security association between the selected first and second network elements prior to requesting of services (see page 7, lines 11-23; column 8, lines 13-24). Specifically regarding claim 16, note that Toth et al. disclose the coupling of the selected network elements (see column 8, lines 1-11).

14. In view of the teachings of Ekbert it would have been an obvious modification to the system of Toth et al. to have provided for the security negotiation of the user to extend to the communication between the first and second network via the security controllers in order to authenticate and verify that the user is indeed an authorized user of the first network, the user's home network.

Art Unit: 2132

15. Claims 8, 9, 19, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toth et al. in view of Vilander et al., U.S. Patent Number 6, 553,219, further in view of UMTS Release 1999, 3GPP, 1999.

Toth et al. fail to explicitly disclose their system as being 3GPP or UMTS, although they do disclose their system to be GPRS, a system of which 3GPP and UMTS are one type. However, Vilander et al. disclose an authentication system within UMTS, which is a system disclosed by the 3<sup>rd</sup> Generation Partnership Project (3GPP). Thus it would have been obvious to use a 3<sup>rd</sup> generation UMTS system when using a GPRS system using IP communication. It would have been obvious to have a 3GPP multimedia communication system when dealing with a UMTS system.

#### CONCLUSION

16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel M. Ungar whose telephone number is 571.272.7960. The examiner can normally be reached on 8:30 - 6:00 Monday - Thursday, Alt. Fridays.

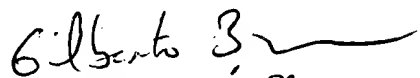

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on 571.272.3799. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
